

## Operating System and Design (19CS2106S)

### Lab- 5

#### Pre-Lab

Reading Directory Information: **opendir ()**, **readdir ()**, and **closedir ()**

OSD Practical-5 190031187  
Radhakrishna

prelab

1. opendir()

It shall open a directory stream corresponding to the directory named by the dirname argument. The directory stream is positioned at the first entry. If the type DIR is implemented using filedescriptor, applications shall only be able to open up to a total of files and directories.

readdir()

It returns a pointer to a dirent structure representing next directory entry in the directory stream pointed to by dirp. It returns NULL on reaching the end of the directory stream or if an error occurred.

closedir()

It shall close the directory stream referred to by the argument dirp. Upon return, the value of dirp may no longer point to an accessible object of the type DIR. If a fileDescriptor is used to implement type DIR, that fileDescriptor shall be closed.

**chown:** Changes a file's owner and/or group.

190031187 Radhakrishna

3. chown: changes a file's owner /or group

To change both the owner and the group of a file use the chown command followed by the new owner and group separated by a colon with no intervening spaces and the target file.

**chmod:** Changes a file's permission settings.

2. chmod: changes a file's permission settings.

To modify the permission flags on existing files and directories, use the `chmod` command. It can be used for individual files or it can be run recursively with the `-R` operation to change permissions for all of the subdirectories and files within directory.

**lstat:** returns file attributes about an inode

4. lstat: returns file attributes about an inode

These functions return information about a file. No permissions are required on the file itself, but in the case of `stat()` and `lstat()` - execute (search) permission is required on all of the directories in path and lead to the file.

stat() stats the file pointed to by path and fills in buf

lstat() is identical to `stat()`, except that if path is a symbolic link, then the link itself is stat-ed, not the file that it refers to.

fstat() is identical to `stat()`, except that the file to be stat-ed is specified by the file descriptor fd.

## IN-LAB

1. attributes.c -- Uses lstat call and struct stat to display file attributes.

### CODE

```
osd-190031187@team-osd:~  
GNU nano 2.3.1 File: attribute.c  
  
#include <stdio.h>  
#include <sys/stat.h> /* For struct stat */  
#include <unistd.h>  
#include <stdlib.h>  
#include <time.h>  
void quit(char *message, int exit_status)  
{  
    printf(" %s",message);  
    exit(exit_status);  
}  
  
void arg_check (long int args, long int argc, char *message, long int exit_status)  
{  
    if (argc != args)  
    {  
        printf("%s", message);  
        exit(exit_status);  
    }  
}  
  
int main(long int argc, char **argv)  
{  
    struct stat statbuf; /* We'll use lstat to populate this */  
    arg_check(2, argc, "Single filename required\n", 1) ;  
    if(lstat(argv[1], &statbuf) == -1)  
        quit("Couldn't stat file", 1);  
    printf("File: %s\n", argv[1]);  
    printf("Inode number: %ld\n", statbuf.st_ino);  
    printf("UID: %ld ", statbuf.st_uid);  
    printf("GID: %ld\n", statbuf.st_gid);  
    printf("Type and Permissions: %o\n",statbuf.st_mode);  
    printf("Number of links: %ld\n", statbuf.st_nlink);  
    printf("Size in bytes: %ld\n", statbuf.st_size);  
    printf("Blocks allocated: %ld\n", statbuf.st_blocks);  
    printf("Last Modification Time: %s", ctime(&statbuf.st_mtime));  
    printf("Last Access Time: %s\n", ctime(&statbuf.st_atime));  
    exit(0);  
}
```

### OUTPUT

```
osd-190031187@team-osd:~

## 2. Lsdir.c -- Lists only directories - Uses S\_IFMT and S\_ISDIR macros

### CODE

```
osd-190031187@team-osd:~/xv6
GNU nano 2.3.1 File: lsdir.c

#include <sys/types.h>
#include <sys/stat.h>
#include <stdio.h>
#include <dirent.h>
#include <stdlib.h>
#include <unistd.h>
void quit (char *message, int exit_status)
{
    printf(" %s",message);
    exit(exit_status);
}

void arg_check(int args, int argc, char *message, int exit_status)
{
    if(argc != args)
    {
        printf("%s", message);
        exit(exit_status);
    }
}

int main(int argc, char *argv[])
{
    DIR *dir;
    struct dirent *dirent; /* Returned by readdir() */
    struct stat statbuf; /* Address of statbuf used by lstat() */
    mode_t file_type, file_perm;
    arg_check(2, argc, "Directory not specified\n", 1);
    if((dir = opendir(argv[1])) == NULL)
    {
        quit("Couldn't open directory", 1);
    }
    if((chdir(argv[1]) == -1)) /* Change to the directory before */
    {
        quit("chdir", 2); /* you starting reading its entries */
    }
    while((dirent = readdir(dir)) != NULL)
    {
        /* Read each entry in directory */
        if(lstat(dirent->d_name, &statbuf) < 0)
        {
            /* dname must be in */
            perror("lstat");
            /* current directory */
            continue;
        }
        if(S_ISDIR(statbuf.st_mode))
        {
            /* If file is a directory */
            file_type = statbuf.st_mode & S_IFMT;
            file_perm = statbuf.st_mode & ~S_IFMT;
            printf("%o %4o %s\n", file_type, file_perm, dirent->d_name);
        }
    }
    exit(0);
}
```

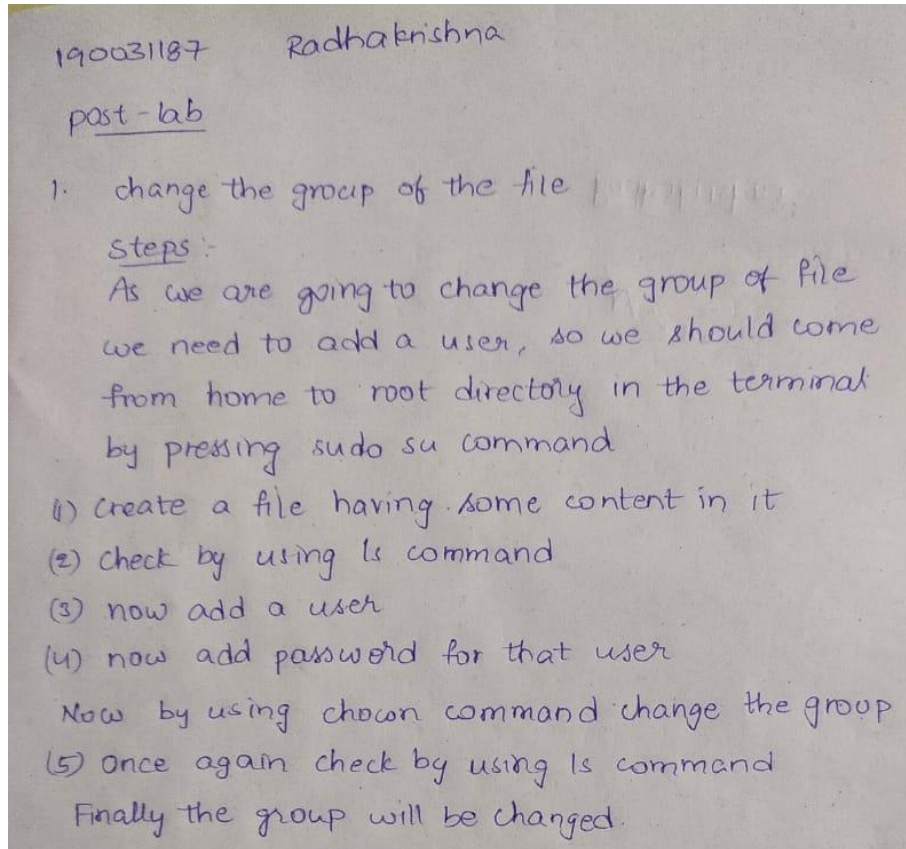

### OUTPUT

```
osd-190031187@team-osd:~/xv6
[osd-190031187@team-osd xv6]$ nano lsdir.c
[osd-190031187@team-osd xv6]$ gcc lsdir.c
[osd-190031187@team-osd xv6]$ mkdir OSD
[osd-190031187@team-osd xv6]$ ./a.out OSD
40000 775 .
40000 775 ..
[osd-190031187@team-osd xv6]$
```

## Post-Lab

1. mychown.c -- change the group of the file.

```
osd-190031187@team-osd:~  
login as: osd-190031187  
osd-190031187@103.206.105.92's password:  
Last login: Wed Sep  9 09:47:03 2020 from 117.192.181.40  
[osd-190031187@team-osd ~]$ cat>>cse.txt  
hi  
[osd-190031187@team-osd ~]$ ls -l cse.txt  
-rw-rw-r--. 1 osd-190031187 osd-190031187 3 Sep  9 13:04 cse.txt  
[osd-190031187@team-osd ~]$ useradd cse  
useradd: Permission denied.  
useradd: cannot lock /etc/passwd; try again later.  
[osd-190031187@team-osd ~]$
```

The reason why it is not working here. I don't have the permission to add a new user

2. mychmod.c -- changed the permission flags of the file.

2. change the permission flags of the file:-

steps:

- (1) create a file having some content in it
- (2) now check all the permissions by using ls command
- (3) change the permissions of the file by using chmod command
- (4) Once check whether the permissions are changed or not by using ls command.

```
osd-190031187@team-osd:~  
[osd-190031187@team-osd ~]$ ls -l cse.txt  
-rw-rw-r--. 1 osd-190031187 osd-190031187 3 Sep  9 13:04 cse.txt  
[osd-190031187@team-osd ~]$ chmod 600 cse.txt  
[osd-190031187@team-osd ~]$ ls -l cse.txt  
-rw-----. 1 osd-190031187 osd-190031187 3 Sep  9 13:04 cse.txt  
[osd-190031187@team-osd ~]$
```
